The Swedish National Knowledge Centre for Climate Change Adaptation is a resource for everybody with a responsibility for, or interest in, Sweden’s adaptation to the impacts of climate change.

The Centre provides tools and information to help society cope with a changing climate, now and in the future. We link science, policy and practice, bringing together the decision makers, businesses, research providers and organisations that make climate change adaptation happen. The Centre collects, develops and shares research, information from authorities and good examples to facilitate sound decision making. The Centre was established in 2012 and is based at the Swedish Meteorological and Hydrological Institute (SMHI).

The Swedish Climate Change Adaptation Portal, www.klimatanpassning.se, which is a collaboration between several Swedish authorities. The portal collects and shares the latest news on climate change adaptation, internationally and in Sweden. It brings together information on how the climate is changing and the effects this is having on society and provides links to useful tools and databases. It also gathers examples of local, national and international adaptation work.
